How to install 8 x 2.5" into E1M4

E1M4 has 4 Hotswap 3.5" bay. We can use bracket "RP-HDD2.5" to mount 2 x 2.5" HDD on each 3.5" bay, so that totally we can install 8 x 2.5" HDD into E1M4.

Instruction:

1. Mount 2 x 2.5" HDD on the bracket RP-HDD2.5. (RP-HDD2.5 comes with the small screws)

2. Take out the 3.5" tray from E1M4 and mount the RP-HDD2.5 onto the tray. (We need to use flat head screws, so that the tray can slide back into the chassis)

3. Remove the internal backplane of E1M4, so that it won't block the way of the Power & Data cables.

hdd backplane needs to be removed

4. Slide the 3.5" tray back to the chassis and connect the power and data cables.
